

Business driven cyber consulting

Cyber consulting putting your
business first.

Security Strategy Delivery

At Toreon, we help you to get a clear understanding of your cybersecurity risks and maturity. We absorb your business context and objectives, compliance requirements and existing controls to define a strategic security roadmap to bring you to the desired level.

We walk the talk and assist you with the roll-out of your cyber strategy. We can take full ownership over your security strategy or structurally empower your CISO with our Security Office as a Service collaboration model in which we cultivate the security processes, technology, awareness and knowledge that you need.

Security is a journey, not a project

Security Analysis & Strategy

We have several assessments available which can help to discover key improvement opportunities. The scope ranges from 360 degree strategic assessment to technology deepdives.

Security Activation

We activate cyber best practices in your company. In a joint effort by your team and our consultants, we install all necessary security measures in well-managed projects.

Security Adoption & Maintenance

Security must be maintained and continuously improved. We assist your continued security journey through different collaboration models.

Our expertise

Toreon has a team of 50+ Cybersecurity experts in the following areas:

Ethical Hacking

Security Strategy, Governance,
Risk and Compliance

OT Security

Cloud Security

Security Architecture

Secure Development

What Toreon stands for

Expert advice

Every Toreon practice is led by seasoned grey-haired consultants allowing us to excel on even the most difficult assignments.

Knowledge sharing

Through coaching and training we don't just increase your security level, but grow the internal expertise within your organization.

Collaboration

Working with us means having a partner in digital security. Our people are driven by knowledge and focused on collaboration.

Impact

We measure our success based on the impact we have on your company.

We enabled digitalization and growth for

Toreon - Business Driven Security

Toreon is completely focussed on security. We are independent from vendors and technical security integrators and provide unbiased expertise and advice to our clients.

We start our security engagements from the needs of the business and its strategy. We create security policy and roadmaps that help your business to achieve its goals. We don't stop your digital progress but rather enable it.

We don't see security as a goal in itself, but rather as a business enabler, as an accelerator. Security is the brakes on the car that allow it to drive faster. We align security policies to your business needs, expectations and risk appetite and implement what is needed. No more, no less. **This is what we aim for, 'minimum security' – but with 'maximum impact'.**

Our engagement with you as a client is long-term. We create and support your corporate security policy and make sure it lands and gets adopted in your digital environment. We create a roadmap as a guide to activate the security policy and help you to reach a higher security maturity, at a level that fits your needs.
